DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6, 15-16 and 19-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Le Vantine (US 4,496,375).

a) Regarding claims 1-3, 15-16 and 21-22, Le Vantine discloses an ionizer apparatus and a method of removing ions (Fig. 4) wherein the improvement comprises a filter comprising a metal screen (68) being electrically coupled to ground and positioned over the air inlet.

b) Regarding claims 4-6, Le Vantine discloses a filter comprising a metal screen (69) being electrically coupled to a dc voltage source and positioned over the air inlet.

c) Regarding claims 19-20 and 23-24, Le Vantine discloses the method of removing ions and further discloses the steps of placing a screen metal filter (68) over an interior surface of the air ionizer apparatus around the electrode and coupling the filter to a voltage source.

3. Claims 1, 7-8 and 17-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Larigaldie et al. (US 4,864,459).

Larigaldie et al. discloses an ionizer apparatus and a method of removing ions (Fig. 1) wherein the improvement comprises a filter comprising a metal screen (6) being electrically coupled to ground and positioned over the air outlet.

Art Unit: 2836

4. Claims 9-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Rump et al. (US 6,375,714)

Regarding claims 9-12, Rump et al. discloses an ionizer apparatus (Fig. 12) wherein the improvement comprises a filter comprising a metal screen (12.3) being electrically coupled to dc feedback voltage (see col. 9 lines 22-24) and positioned over the air outlet and a sensor at the air outlet for sensing ion content. See col. 9 lines 8-10 and col. 2 lines 52-55.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Le Vantine in view of Pui et al. (US 5,973,904).

Le Vantine discloses a filter comprising a metal screen (69) being electrically coupled to a dc voltage source and positioned over the air inlet. Le Vantine does not disclose that the electrode is coupled to an ac power source. Pui et al. discloses an air ionizer in which the electrodes are supplied with ac current. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize ac current to apply to the electrodes because this will result with a more uniform charge level on the particles. See col. 10 lines 18-21.
